

ASHDOWN BUSINESS PARK

Client: Mildrens
Value: £224,500
Duration: 4 Weeks

Project Detail

Suttle Piling were instructed to install an H-beam kingpost wall with the purpose of retaining a soil bank in the construction of a new major retail outlet.

We used our Klemm 709 to bore the 450mm Ø holes and fill with concrete before using our Volvo EC300 with Movax attachment to set the steels in the concrete base before inserting the concrete panels which create the wall.

The works were all completed ahead of schedule.
