

## Suttle Purbeck Stone

**Client:** Glebe Episcopal Church, Virginia USA. Mr Philip Ford.  
**Date:** Jan 2019  
**Material:** Honed Purbeck Grub paving slabs – Door thresholds

### Project Detail:

California Quarry produced and supplied Honed Purbeck Grub paving slabs for new flooring in a church in Virginia, USA. The flooring was approx. 20m<sup>2</sup> in 300mm & 400mm widths x random lengths x 19mm thick.

The paving slabs were used to create a new stone aisle through the middle of the church. California Quarry also supplied 2 door thresholds.

The paving slabs were produced on site and collected by the customer's own transportation and shipped to the US via their own planning. The slabs were securely stored within plastic containers to keep them protected throughout the transportation process.

The project took around two weeks in total within the quarry and was managed by Nick Crocker, Quarry manager and Director Matthew Suttle.

### Testimonials:

Client Mr Ford who was the main point of contact during the project gave his feedback once the job was complete; Nick has been extremely helpful and we have spent many hours on the phone discussing the project and how to avoid problems, we have had nothing but praise for the Job that that was done for the floor.
