

Swanage Eastern Jetty Repair Works

Client: Swanage Town Council

Value: £9,925

Duration: 1 week

Project Detail

The eastern jetty in Swanage had become run down after many years of use. Located near the boat park it is used by local fisherman as well as recreational boats and the lifeboat.

Please refer to the map on the right for the exact location.

Suttle Projects have extensive experience in coastal and marine projects, and as a result working around tides, making a project of this nature very straight forward.

More detail about the project:

There were many repairs that needed to take place, such as:

- Timber fenders which were missing were to be repaired or replaced and the base concreted.
- Install missing horizontal support braces
- Reattach rubber which has become loose

Both a telehandler and a boat were required to carry out the repairs.
